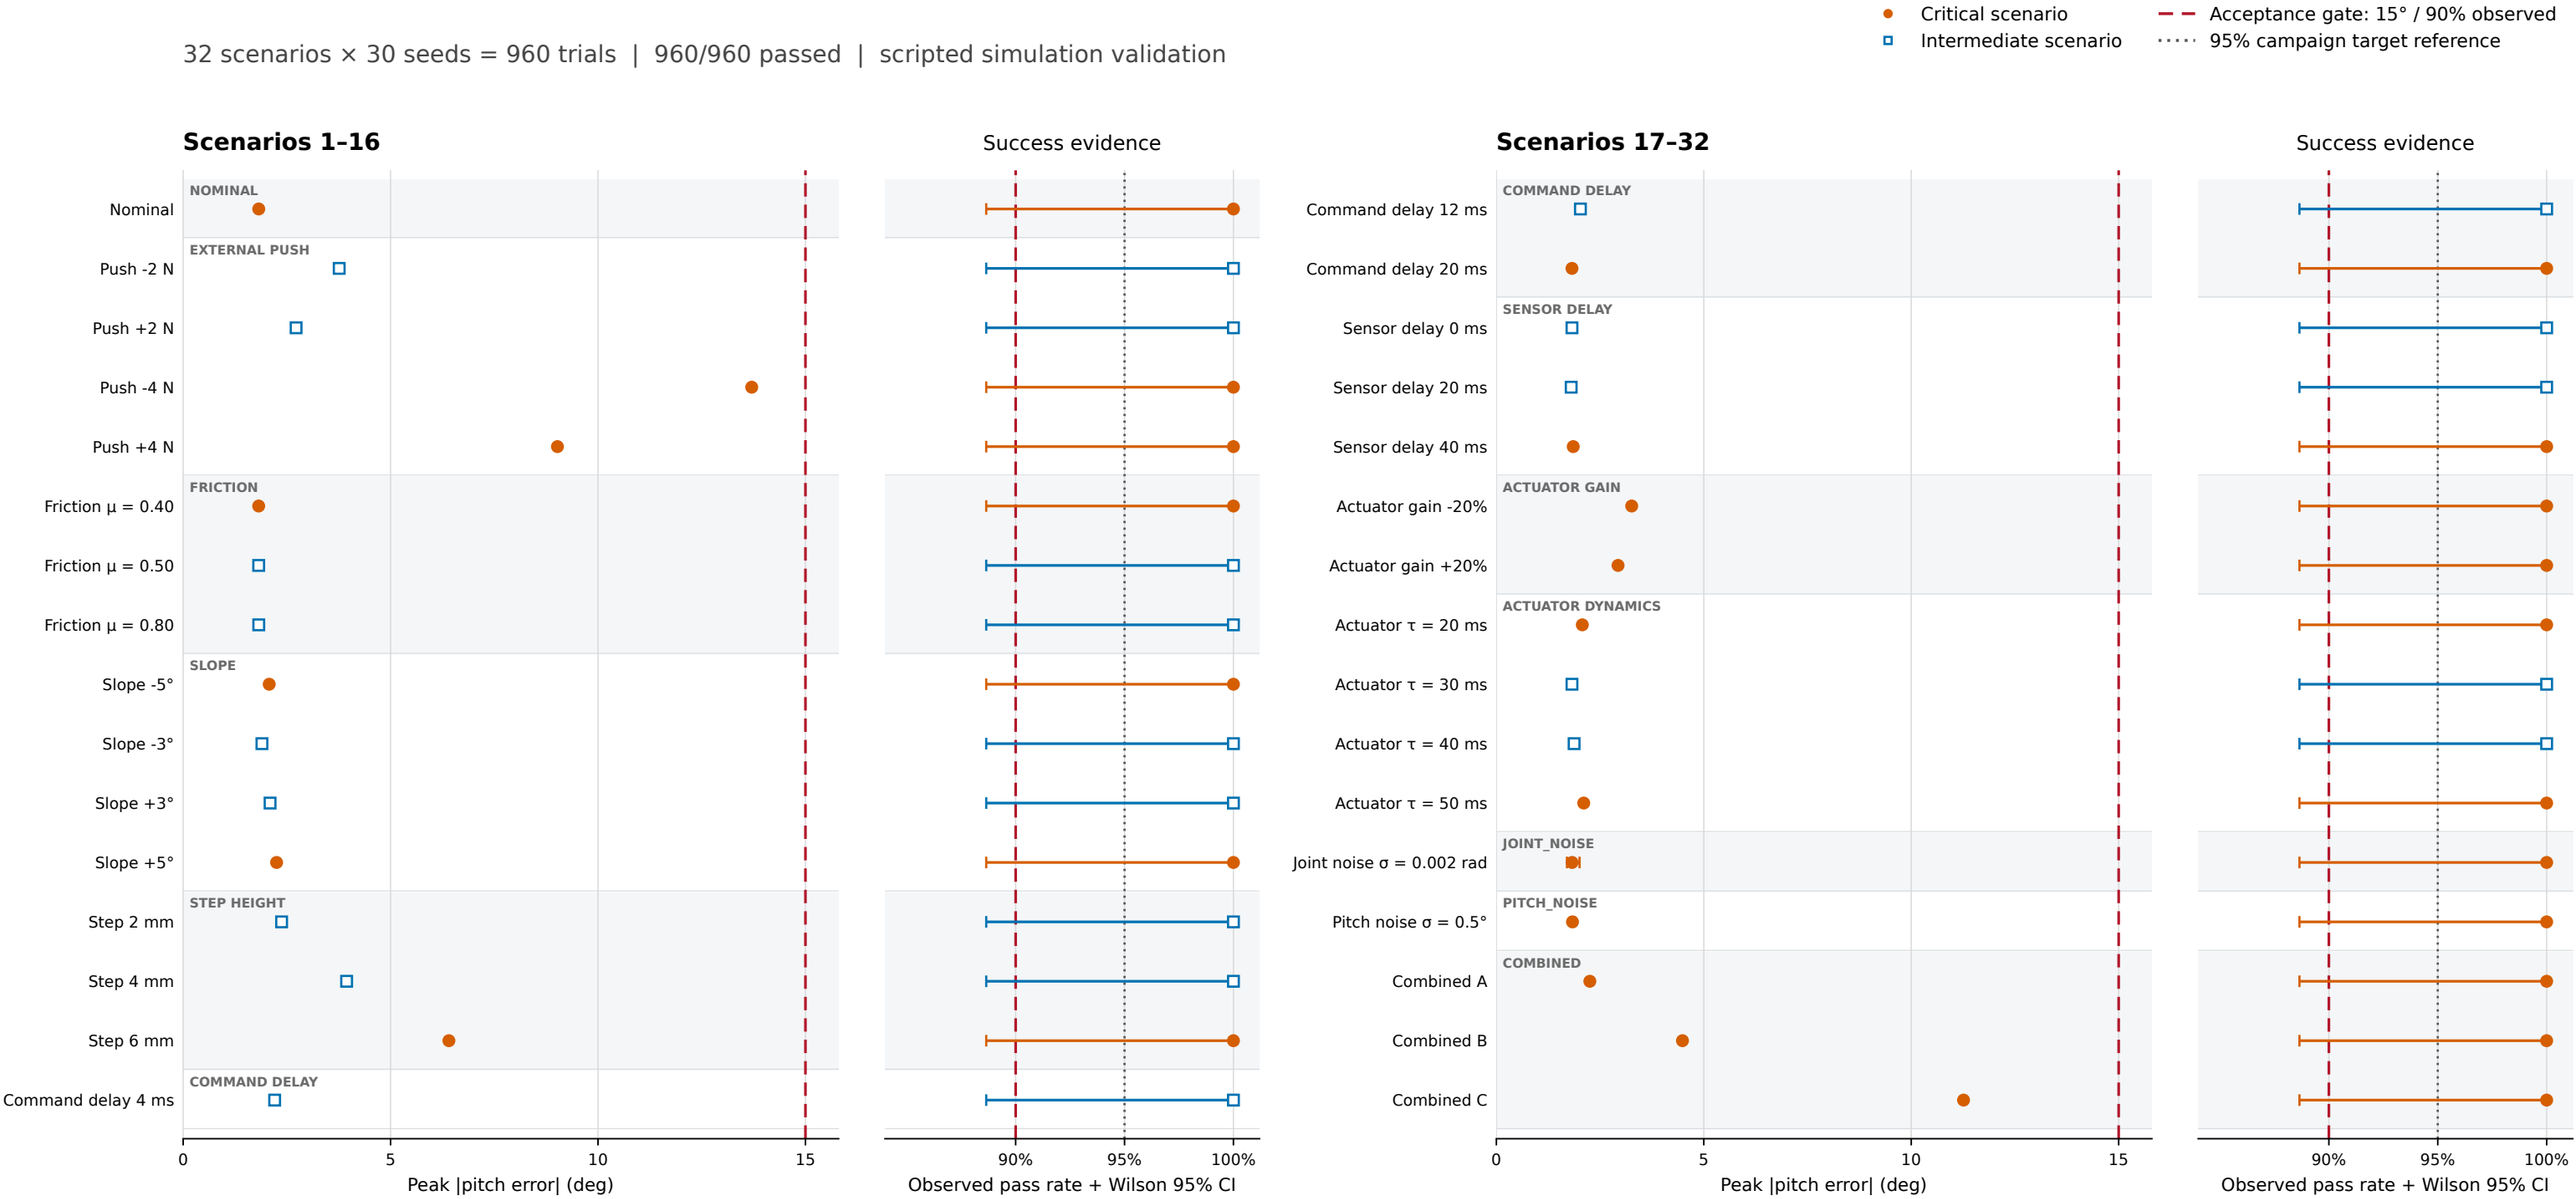
Robustness Evidence Across the Full 32-Scenario Campaign

32 scenarios × 30 seeds = 960 trials | 960/960 passed | scripted simulation validation



Per-scenario acceptance uses observed success ≥ 90%; Wilson intervals show sampling uncertainty (30/30 gives a lower bound of 88.65%).

All values are from the recorded C2_final MuJoCo campaign; no hardware claim is made.
